

Lightning

Lightning can be very dangerous. It can start fires, cause damage to your home and electrical appliances and can injure or even kill you.

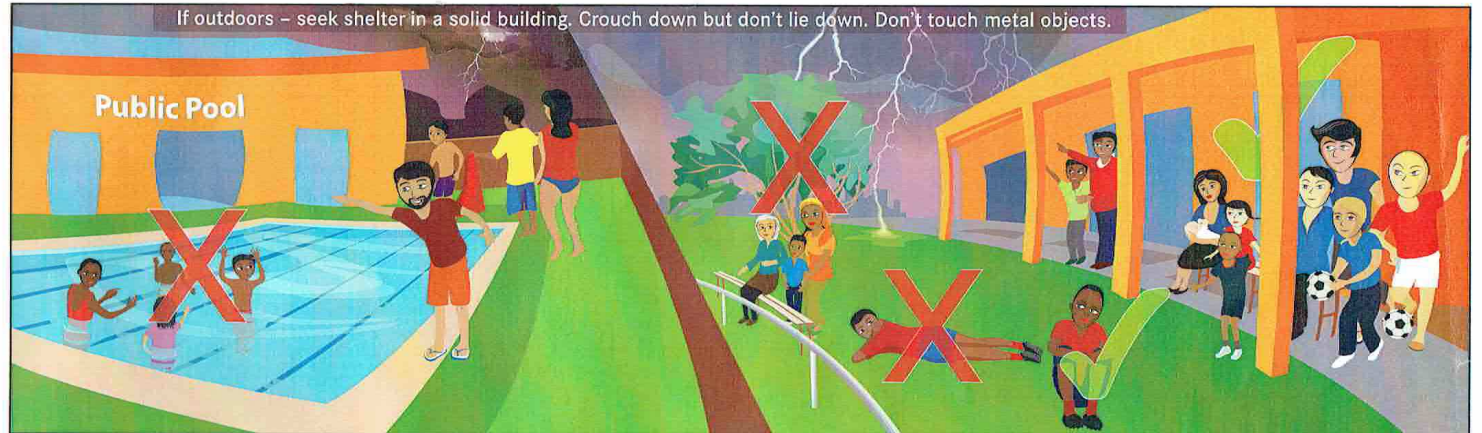

Unplug electrical appliances and only use a cordless phone.

Prepare an emergency kit.

If outdoors – seek shelter in a solid building. Crouch down but don't lie down. Don't touch metal objects.

And don't forget your pets during lightning.

After lightning – stay tuned to local weather reports on your radio. Check on your neighbours. Contact your State Emergency Service (SES) if you have damage.
